Dropit@

Beta V1 Quick Guide

Install it. Drop something in. Confirm it. Let Dropit@ remember it.

IPHONE + ANDROID

What it does

Important things arrive everywhere. Paste, type, dictate, or add a screenshot. Dropit@ turns it into a reminder you can confirm before saving.

A simple guide for the first 25 beta users

Start here

Use one phone. Keep the app installed and notifications enabled.

1 Open the link on your phone

Dropit@ works from the browser first. Installation is recommended so reminders can reach you when the app is closed.

2 Choose your phone below

iPhone: Safari. Android: Chrome. The app works on both, but the installation buttons are different.

3 Allow notifications when asked

Choose Allow. Without it, you can still save reminders, but closed-app reminders cannot arrive.

A few simple boundaries

No account. Your reminders stay on this device. Do not use it for emergencies or anything that must be shared across devices.

Install on iPhone

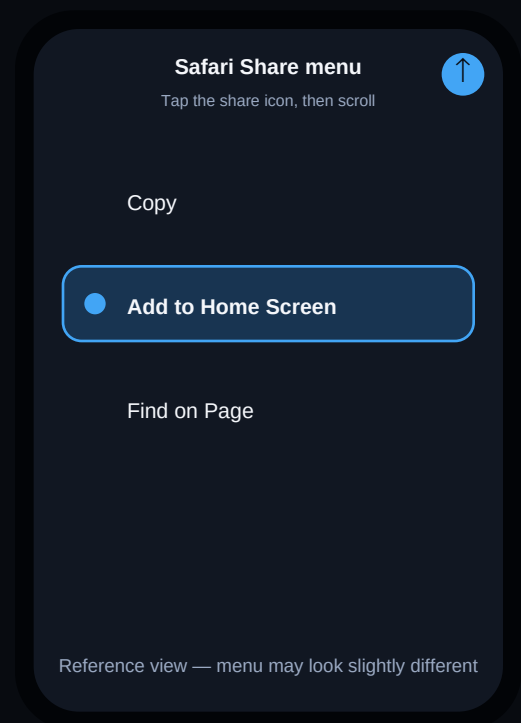

Use Safari. Installation is the best way to receive reminders when Dropit@ is closed.

- 1 Open the Dropit@ link in Safari**
If the link opens in Facebook or another app, choose Open in Safari first.

- 2 Tap the Share button**
It is the square with an upward arrow at the bottom of Safari.

- 3 Choose Add to Home Screen**
Keep the name as Dropit@, then tap Add.

- 4 Open Dropit@ from its new icon**
The first time you save a reminder, choose Allow when your iPhone asks about notifications.

Install on Android

Use Chrome for the beta. The menu wording can vary slightly by phone.

1 Open the Dropit@ link in Chrome

Use Google Chrome, not an in-app Facebook or Instagram browser.

2 Open Chrome's three-dot menu

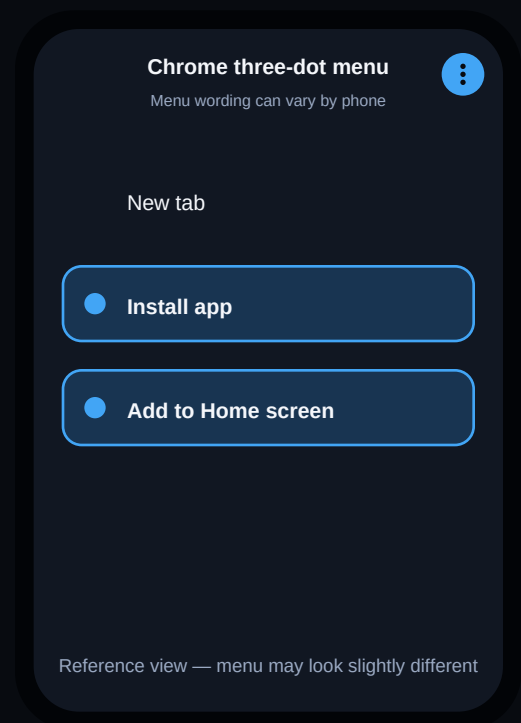

Look for Install app or Add to Home screen.

3 Confirm the install

Dropit@ gets its own icon on your home screen or app list.

4 Allow notifications

When Android asks, choose Allow. If you miss it, turn notifications on later in Android Settings for Dropit@/Chrome.

Add something

Everything starts in the large box. You do not need folders, projects, or categories.

1 Type

Tap the large box and write: "Remind me tomorrow at 3 PM to call Mike."

2 Paste

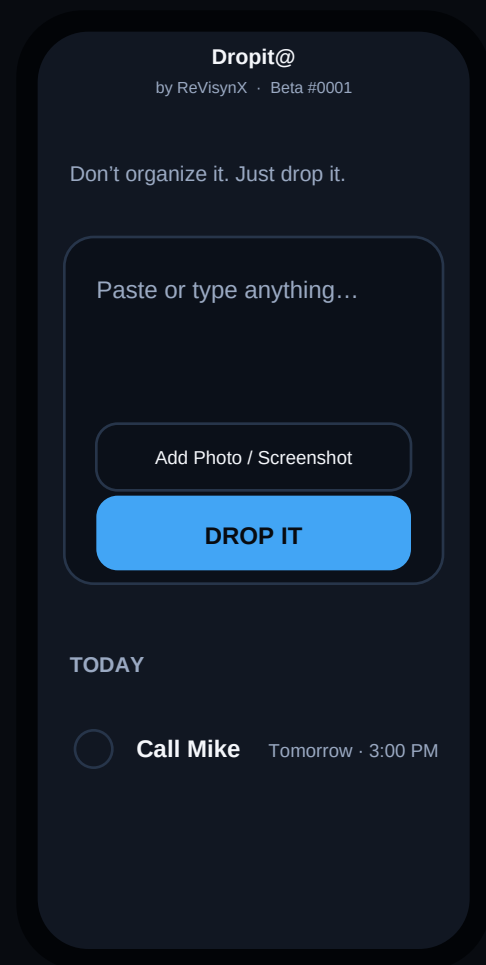

Copy a text, email detail, address, or appointment message. Press inside the box, then Paste.

3 Dictate

Tap the microphone on your phone keyboard, speak naturally, then review the words before tapping DROP IT. Dropit@ does not record audio itself.

4 Drop it

Tap DROP IT. Dropit@ reads what matters and shows you its answer before it saves anything.

Add a photo or screenshot

A clear screenshot works best. Keep the event title, date, and time visible.

1 Tap Add Photo / Screenshot

Choose a screenshot from your photo library, or take a photo of the appointment, bill, or note.

2 Check the selected image name

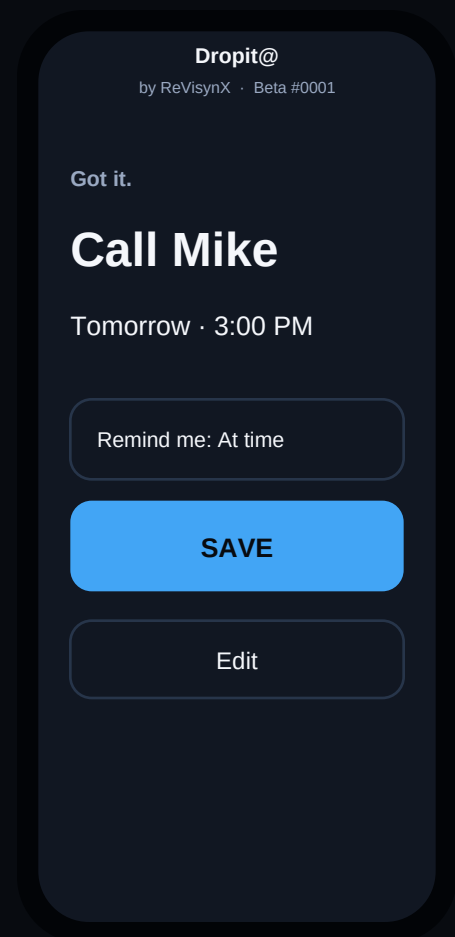

It appears above the DROP IT button. If it is the wrong photo, choose another one.

3 Tap DROP IT

Give it a few seconds. A cropped, clear screenshot is faster and more reliable than a distant photo.

4 Always review the result

You are the final check. Use Edit if a name, date, time, or note needs changing.

Confirm and save

Dropit@ suggests. You decide.

1 Read the title, date, and time

Do not save a reminder unless those details look right.

2 Choose reminder timing

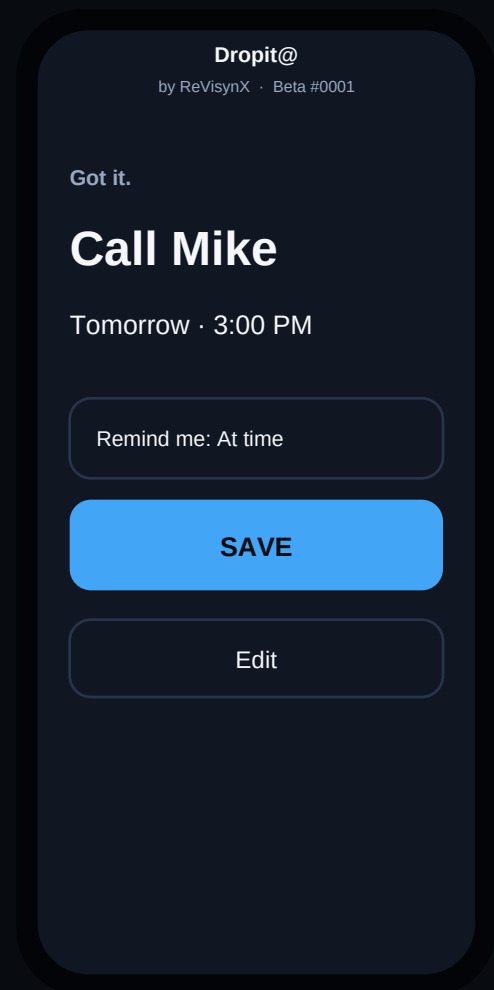

Pick At time, 15 minutes before, 1 hour before, or 1 day before.

3 Missing time?

Choose Morning, Afternoon, or Pick time. Dropit@ will never quietly invent an important time.

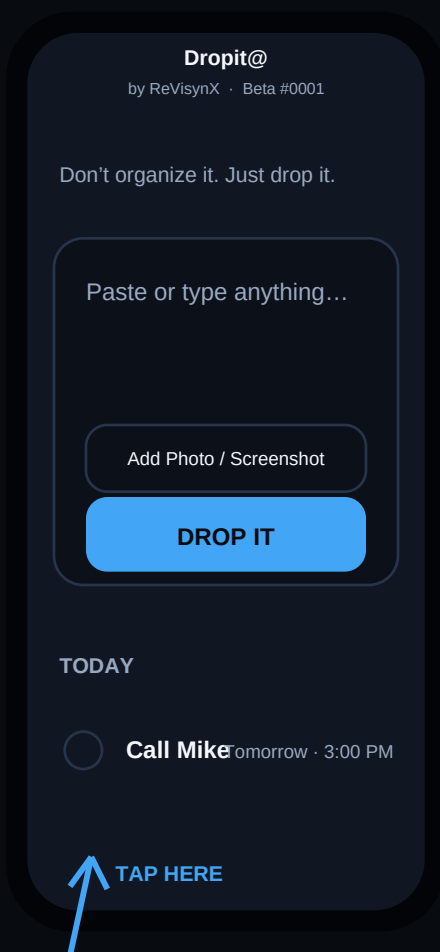

4 Tap Edit when needed

Edit lets you change the title, notes, date, or time. Tap Done, then SAVE.

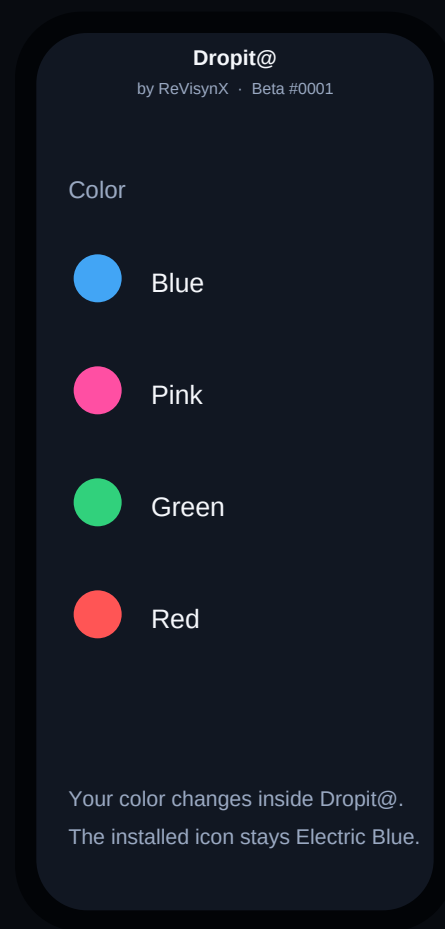

Find it, finish it, make it yours

Your active reminders are split into Today and Later.

Finish an item

Tap its blue circle. It leaves your active list and its scheduled closed-app notification is cancelled.

Change your color

Tap the three dots at the top right, then choose Blue, Pink, Green, or Red. Your choice stays on this device.

Reminder check and help

A few seconds now prevents a missed reminder later.

Before you rely on it

1. Install Dropit@ from Safari or Chrome. 2. Allow notifications. 3. Create one test reminder five minutes ahead. 4. Lock your phone and confirm it arrives.

If something does not look right

- **Wrong title, date, or time**

Use Edit before SAVE.

- **Photo did not read well**

Try a cropped screenshot with the title, date, and time visible.

- **No notification**

Open the installed app, confirm notifications are allowed, and make a new short test reminder.

- **Marked Done while offline**

It will leave the list, but the remote notification may not cancel until the phone is online. Keep the phone connected when completing items.

Thank you for being one of the first 25 people to test Dropit@ in the real world.
